

# LIQUIDSHIELD HOW TO SPRAY

<b>COVERAGE CHART</b>	Accessories: 2x Aerosols
	Partial Hood: 3x Aerosols
	Wheels up to 17in: 4x Aerosols
	18-19in Wheels: 6x Aerosols
	20-22in wheels: 7x Aerosols

## BEFORE GETTING STARTED MAKE SURE THAT

You aren't spraying in high humidity, direct sunlight or windy conditions. Only use in temperatures between 68-82 °F with humidity level below 60%.

**ALSO** Only apply LiquidShield on OEM clear coated or metal surfaces.  
We only recommend spraying on wheels (face only), partial hood & accessories.  
We do not recommend spraying the inner barrel.  
We do not recommend applying LiquidShield on plastics, stickers, rubber, laminated centercaps.  
Please allow the surface to fully cure (5+ days) before exposing them to the rain or washing them.  
If you are spraying emblems, you must remove them from the car before spraying.

### STEP

## 1 PREPARATION

USE Prep Spray | Microfiber cloth

Thoroughly wash and rinse the surface to remove loose dirt and debris.  
Use Superwrap Prep Spray. Let the product sit for no more than one (1) minute.  
Wipe surface dry with a clean microfiber cloth.

- \* Avoid using household soaps to wash the surface.
- \* If your surface is repainted/damaged and the finishing clearcoat has been affected, do not apply LiquidShield.

### STEP

## 2 MASKING

USE Masking tape | Tape & Drape

Use 3M Auto Performance Masking Tape.  
Extensively mask off surrounding areas (tires, valve stems, inner-wheel barrel, panels, etc.).  
Use a plastic card to tuck the tape into the gap.

- \* We recommend putting the aerosols in hot water for 10 minutes before spraying.

### STEP

## 3 SPRAYING

USE LiquidShield Aerosol

Apply one light first coat. Allow a 15 minute drying period between coats.  
Apply 10 wet coats of LiquidShield.

- \* Use all cans provided in the kit.

### STEP

## 4 UNMASKING

USE Card | Blade

Wait at least 1h for the final coat to dry and use a card or blade to crease the tape.  
Pulling away from the surface, remove masking tape.
